

Bekaert enters backsheet lamination market

Bekaert Specialty Films a subsidiary of the Bekaert group and well known for its sputtering targets has entered the PV module backsheet lamination market with a new range of materials under its Solar Gard PV T series. Bekaert said that it has capacity to produce more than 4 million square meters per year (400MW) at its San Diego, U.S.A facility. The Solar Gard PV T series can be seen in Hall B2G Stand 42.

Solar Gard PV backsheets are available in roll form that fits a wide range of crystalline silicon photovoltaic panel sizes and configurations and are being offered in two thicknesses for different electrical insulation performance.
